How to use the wordlist_union.py program:

- 1.) download the entire folder– the other files are the dictionaries (TXTs) and the full AFINN program (written by Finn Årup Nielsen – <https://github.com/fnielsen/afinn>).
- 2.) run the wordlist_union.py program and follow the prompt for the input file (the csv which you want the union info for).
- 3.) wait for it to complete. The output will be dropped off in the same directory as the wordlist_union.py file.
